

CORREX SP TLSO

DCT-0464

Today's Trend... Tomorrow's Standard

The Trend Correx TLSO lines feature our patent pending "Telescoping" Spinal Support System that allows real-time adjustment for the thoracic spinal region. The single or dual-arm upper pulley mechanism pulls the shoulders back and down to a neutral position while sitting or standing, allowing the patient to optimize support and comfort in seconds.

The Correx SP TLSO features a customizable sternal pad kit with chest straps that can be positioned as desired on the chest. This brace also has the ability to break down and give the patient multiple support configurations as they progress through their rehabilitation process.

The SP TLSO also utilizes comfortable, moisture-wicking materials and breathable zones throughout with the natural airflow of Trend's new Breathe-Thru Mesh making it the coolest, most comfortable TLSO on the market.

NEW: No-Grip closure for patients lacking grip strength

Clip-in Sternal Pad Kit adjusts easily and can be removed to progress with patient recovery

Easily customize chest strap and pad positions without tools

PDAC APPROVED
HCPC: L0464

CORREX SP TLSO

DCT-0464

NEW: TELESCOPING SPINE TECHNOLOGY

The groundbreaking Correx TLSO Series features a patent pending telescoping thoracic adjustment. This innovation allows the wearer to achieve optimal comfort and compression while wearing the brace and without manually manipulating the back of the brace like other TLSO's.

"No-Grip"
Single or dual arm pulley system adjusts both thoracic and belt regions

1. "Telescoping" spinal technology activates when wearer draws upper pulley

2. Straps pull shoulders back and down to a neutral position

3. Provides support & corrects slouching and posture to reduce spinal stress
